Professional Experience

Site Reliability Engineer

Zapopan, Jal, Mexico

Oracle

Jul 2025 – Current

- Support and maintain the reliability of large-scale GPU infrastructure within Oracle Cloud Infrastructure, helping sustain stable operations for high-performance compute environments.
- Perform root cause analysis across Linux operating systems, system services, networking, and GPU-related components to diagnose and resolve complex infrastructure failures.
- Analyze logs, metrics, and system signals to identify recurring failure patterns, accelerating troubleshooting and improving overall platform reliability.

Systems Validation and Operations Engineer

Zapopan, Jal, Mexico

Intel Labs

Feb 2023 – Jul 2025

- Contributed to the development and operational validation of [Hala Point](#) [🔗](#).
- Engineered and executed automated functional validation and debugging processes using Bash and Python scripting within Linux environments, reducing hardware troubleshooting time by 28% and ensuring full system reliability and functionality.
- Built and administered custom Linux images for ARM Processors deployed on neuromorphic systems, ensuring consistent and controlled operating environments for internal and external clients.
- Managed systems configurations and deployments using Chef, implementing Infrastructure as Code principles to enhance consistency, scalability, and enable further automation of system configurations and updates.
- Enhanced system reliability and availability by performing deep-dive debugging and technical enablement for Intel Neuromorphic Research Community, reducing downtime by 42% and significantly improving operational efficiency.

Electrical Validation Engineer

Zapopan, Jal, Mexico

Intel Corporation

Aug 2021 – Jan 2023

- Led the development of a Python-based real-time tracking GUI, which streamlined asset management and increased operational efficiency, resulting in a 65% reduction in lost items.
- Assisted in the readiness, testing, and debugging of client products' critical interfaces such as USB3, SATA, PCIe, and DMI, contributing to overall product reliability and stability.

Electronics Engineering Intern

Colima, Col, Mexico

Intel Corporation

Feb 2020 – Jun 2020

- Engineered a data gateway using a Raspberry Pi, enabling seamless data exchange between industrial systems (Siemens LOGO! PLC) and higher-level platforms using Modbus TCP/IP and S7 protocols.
- Implemented local and remote monitoring and control dashboards using Node-RED and Ubidots (integrating via MQTT protocol), achieving real-time operational visibility and enabling remote data analytics and control capabilities.

Education

Tecnologico de Ciudad Guzman

Aug 2015 – Jun 2020

B.S. in Electronics Engineering

- GPA: 9.4/10
- President of the 11th National Congress of Electronics Engineering.

Publications

Mathematical model in Zigbee communication

November 2018

Ernesto Ruiz, *Carlos Patricio*, Jorge Gutierrez
